

## A B S T R A C T

A vehicle suspension including a subassembly  
5 comprising a coil spring mounted between two supports of  
variable spacing. One of the supports (18) is  
constrained to move along a trajectory that is curved  
relative to the other support, and the pitch of an end  
portion of the corresponding end turn (20a) of the spring  
10 (12) varies in a manner that is negative or zero.
